# Mengapa Trinkka?

- Menyediakan Fitur Proofread
- Fitur Tambahan: paraphrasing, citation checking, publication checking, style guide, journal finder, latex-compatible, [ithenticate integration], [user management]
- Lebih murah, credits (carry over), dan elsevier-features.

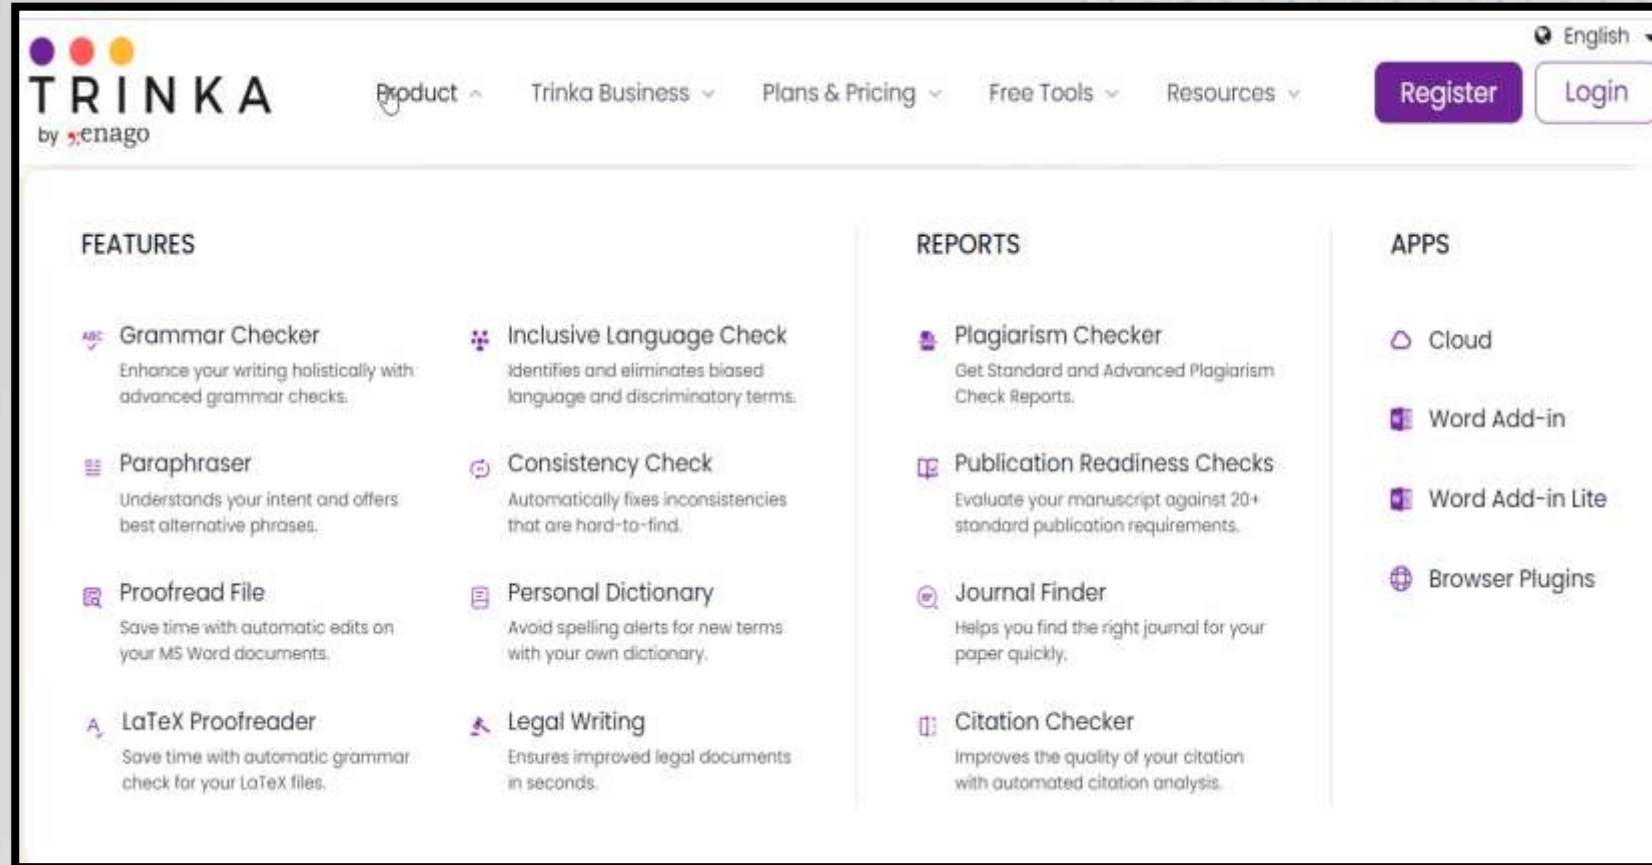

# Comprehensive Writing Assistant

## Uniquely Suited for Academic Writing

- Specialized academic writing support
- Proofreading research files
- LaTeX compatibility
- Versatile output options

## For Every Academic Use case

- Advance grammar checks
- Contextual assistance for academic text
- Paraphraser
- Consistency checker
- Plagiarism checker
- Customizable spell check
- Academic style guides

The screenshot shows the TRINKA website by enago. The header includes the TRINKA logo, navigation links for Product, Trinka Business, Plans & Pricing, Free Tools, and Resources, and buttons for Register and Login. The main content is divided into three columns: FEATURES, REPORTS, and APPS. The FEATURES column lists Grammar Checker, Paraphraser, Proofread File, LaTeX Proofreader, Inclusive Language Check, Consistency Check, Personal Dictionary, and Legal Writing. The REPORTS column lists Plagiarism Checker, Publication Readiness Checks, Journal Finder, and Citation Checker. The APPS column lists Cloud, Word Add-in, Word Add-in Lite, and Browser Plugins.

FEATURES	REPORTS	APPS
<b>Grammar Checker</b> Enhance your writing holistically with advanced grammar checks.	<b>Plagiarism Checker</b> Get Standard and Advanced Plagiarism Check Reports.	<b>Cloud</b>
<b>Paraphraser</b> Understands your intent and offers best alternative phrases.	<b>Publication Readiness Checks</b> Evaluate your manuscript against 20+ standard publication requirements.	<b>Word Add-in</b>
<b>Proofread File</b> Save time with automatic edits on your MS Word documents.	<b>Journal Finder</b> Helps you find the right journal for your paper quickly.	<b>Word Add-in Lite</b>
<b>LaTeX Proofreader</b> Save time with automatic grammar check for your LaTeX files.	<b>Citation Checker</b> Improves the quality of your citation with automated citation analysis.	<b>Browser Plugins</b>
<b>Inclusive Language Check</b> Identifies and eliminates biased language and discriminatory terms.		
<b>Consistency Check</b> Automatically fixes inconsistencies that are hard-to-find.		
<b>Personal Dictionary</b> Avoid spelling alerts for new terms with your own dictionary.		
<b>Legal Writing</b> Ensures improved legal documents in seconds.

**Data Descriptor Template**

**Electronic News Dataset for Native Advertisement Detection**

Brian Rizqi Paradisiaca Darnoto<sup>1</sup>, Daniel Siahaan<sup>1</sup>, Diana Purwitasari<sup>1</sup>

**Affiliations**

1. Informatics Department, Institut Teknologi Sepuluh Nopember, Surabaya, Indonesia

Corresponding author(s): Daniel Siahaan (daniel@if.its.ac.id)

**Abstract**

Native advertising has rapidly evolved into a predominant online marketing strategy, adequately blending with editorial content to the extent that readers often remain unaware that they are involved with sponsored material. This integration, spanning diverse formats like text articles, videos, and social media posts, enriches its application but concurrently escalates the detection challenge. Nuanced identification and comprehension of native advertising necessitates advanced methodologies underpinned by datasets that are both relevant and expansive. This paper elucidates a systematic approach to data collection and annotation, aiming to construct a specialized dataset poised to significantly enhance native ads detection efforts. Through the meticulous aggregation of news from six mainstream electronic news portals in Indonesia, the study extends beyond the mere identification of native ads to encompass four additional implicit characteristics typically associated with such content. The resulting, carefully annotated dataset emerges as an invaluable resource, promising to propel the development and evaluation of sophisticated native ads detection algorithms. This advancement holds the potential to augment transparency within online advertising and contribute to a clearer delineation between pure editorial content and sponsored material.

**Scope Guidelines**

Data Descriptors submitted to *Scientific Data* should provide detail research datasets, including the methods used to collect the data and the quality of the measurements. Data Descriptors focus on helping testing hypotheses, or presenting new interpretations, methods or datasets must be deposited in an appropriate public repository prior to and their completeness will be considered during editorial evaluation must be made publicly available without restriction in the event accepted for publication (excepting reasonable controls related to human privacy issues or public safety).

## A Rare Case on Familial Hyperlipidemia with Atrial Septal Defect and Polydactyly

A. B. Author  
Institute of Hyperlipidemia, Glasgow  
author@ioh.edu

**Keywords:** Hyperlipidemia, Familial; Atrial Septals Defects; Polydactyly; Genetical Diseases, Inborn Genetic Predisposition to Disease

### Abstract

This case report presents a rare combinations of familial hyperlipidemia, atrial septal defect (ASD), and polydactyly in an 11-year-olds patient. Familial hyperlipidemia are genetic disorder characterised by high levels of lipids in the blood, which lead to the cardiovascular complications. ASD is a congenital heart defect, involving the incomplete closure on the atrial septums, polydactyly referring to the presence of an extra fingers or toes. The patients family history is significant, with similar abnormalities observed on other family members. This report is

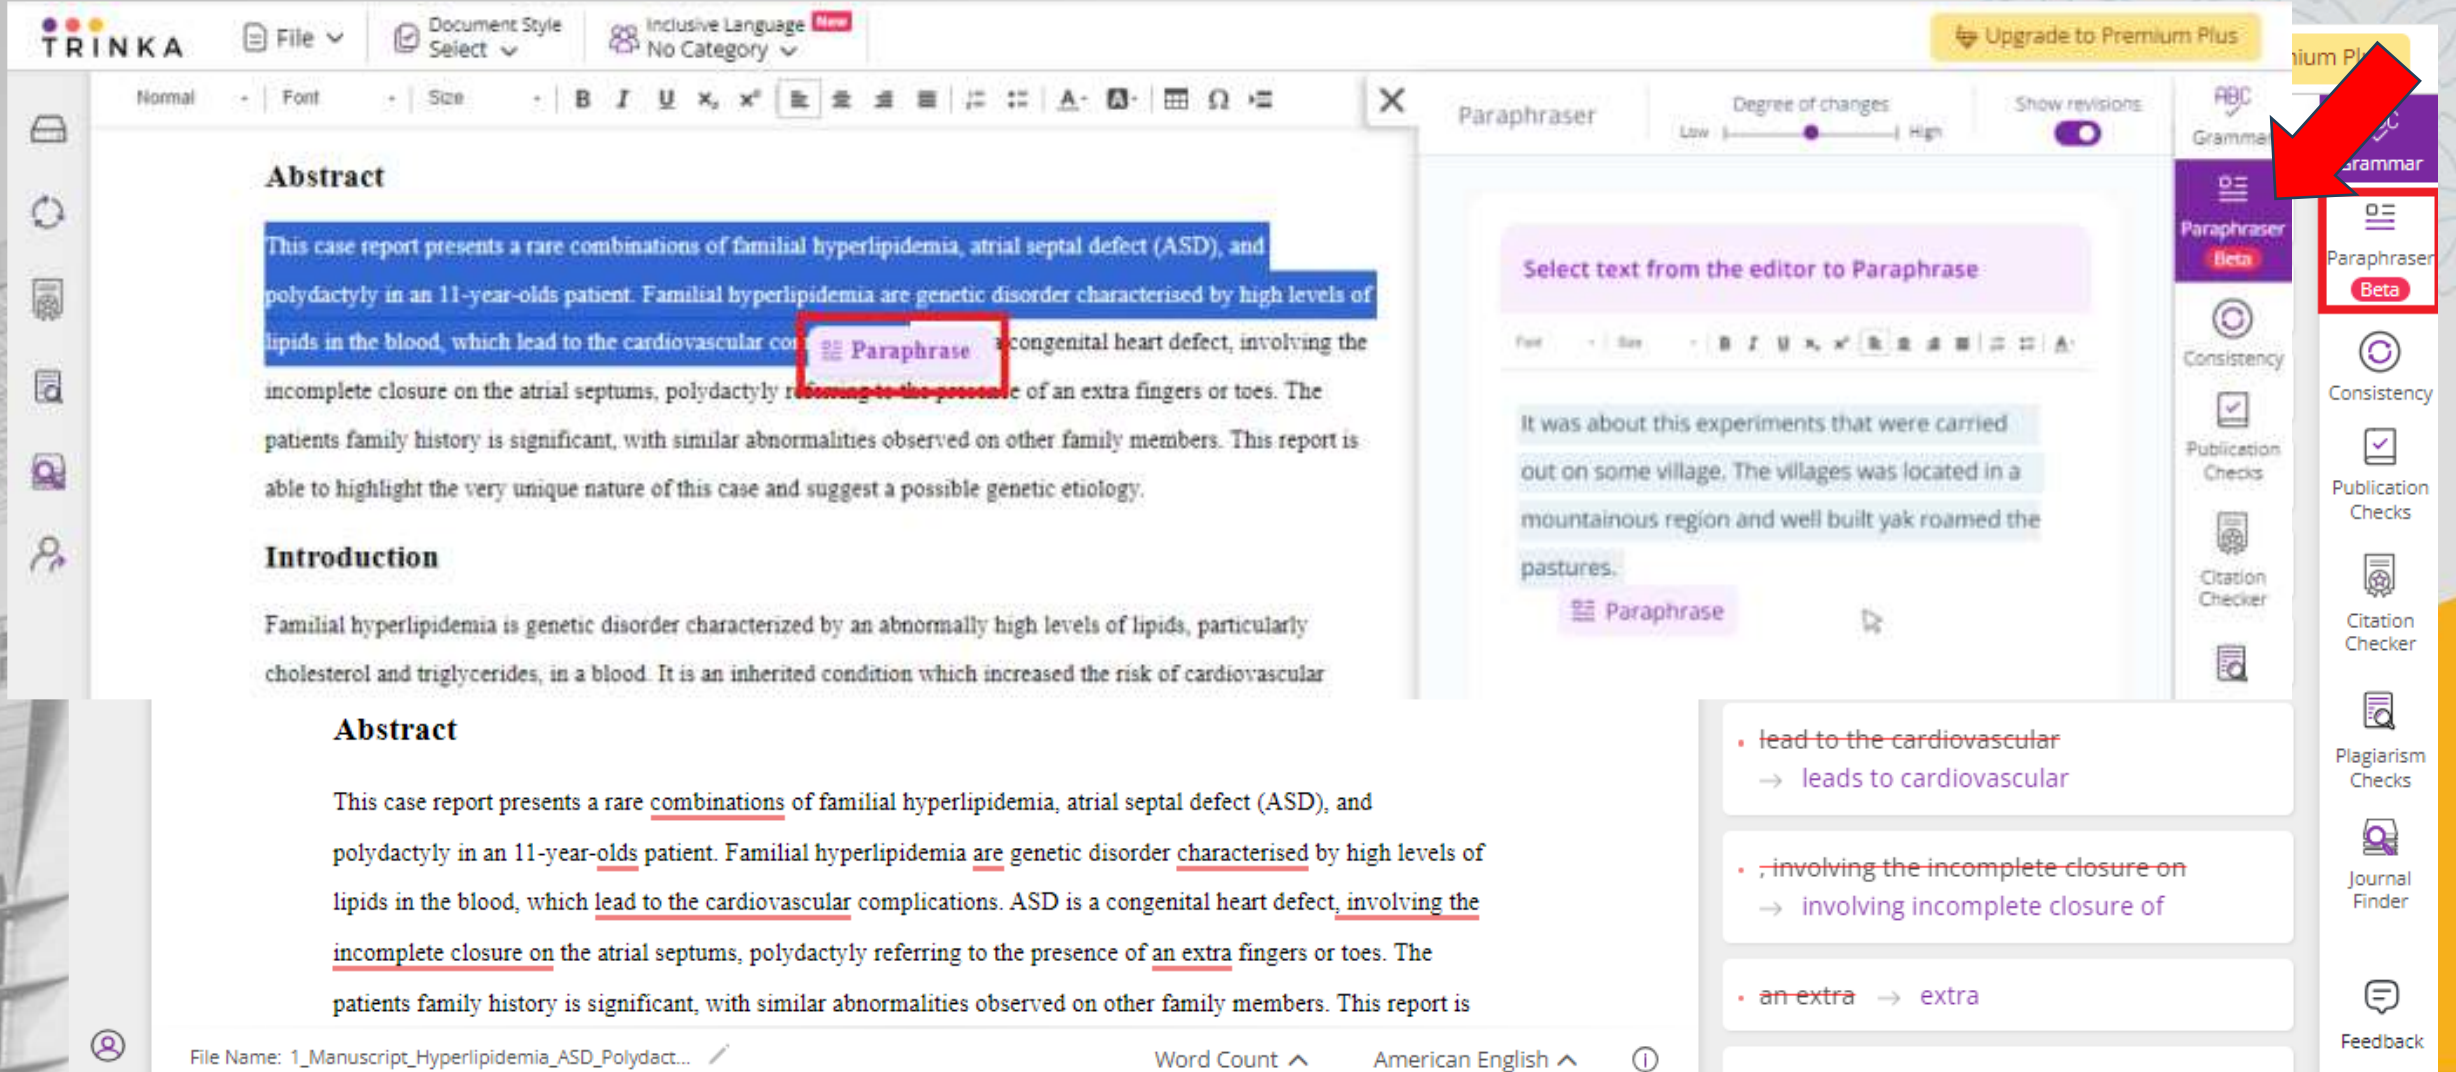

- ~~on~~ → of
- ~~Disease~~ → the Disease
- ~~combinations~~ → combination
- ~~olds~~ → old

has been validated by experts. The Native Ads Dataset includes 5 labels: sentiment label, **persuasive label**, label describing company/product, news perspective label, and native ads label. The format of the annotation file is as follows:

- <id> <content> <positive-label> <persuasive-label> <product-label> <perspective-label> <native-ads-label>

Where <id> is the content class id, <content> is the body of the news, <positive-label> is the sentiment label of the news, <persuasive-label> is the **persuasive label**, <product-label> is the label describing the company/product, <perspective-label> is the news perspective label, and <native-ads-label> is the native ads label.

### Technical Validation

Data validation was conducted in two ways: validation by experts and testing using one of the deep learning methods, BiLSTM. Expert validation was performed during the establishment of the ground truth for native ads in news content. The second validation involved trials to detect native ads using BiLSTM.

### Usage Notes

The native ads dataset was published in a single file with an Excel (xlsx) format named native\_ads\_dataset.xlsx.

### Code Availability

The native ads dataset is available on the Figshare repository<sup>16</sup> and the scraping code is available on a GitHub repository<sup>17</sup>. The data scraping was performed using the BeautifulSoup library in Python, and the code is available online<sup>18</sup>.

## Data Descriptor Template

### Electronic News Dataset for Native Advertisement Detection

Brian Rizqi Paradisiaca Darnoto<sup>1</sup>, Daniel Siahaan<sup>1</sup>, Diana Purwitasari<sup>1</sup>

#### Abstract

Native advertising has rapidly evolved into a prominent content to the extent that readers often remain unaware of its presence, spanning diverse formats like text articles, video ads, and social media posts, making the detection challenge. Nuanced identification methodologies underpinned by datasets that are both relevant and expansive. This paper elucidates a systematic approach to data collection and annotation, aiming to construct a specialized dataset poised to significantly enhance native ads detection efforts. Through the meticulous aggregation of news from six mainstream electronic news portals in Indonesia,

## Scope Guidelines

Data Descriptors submitted to *Scientific Data* should provide detailed descriptions of valuable research datasets, in the quality of the data, testing hypotheses, datasets must be described and their completeness must be made public (accepted for publication safety).

## Check quality of your citations

Easily identify issues with the quality of cited references. Each citation is assessed for visibility and reproducibility metrics.

Use this feature to cite strong papers to improve the strength of argumentation in your paper and avoid negative reviewer feedback.

## Identify weak citations in 3 simple steps

01

### Submit file

Submit the doc/docx file with all citations  
(Incomplete citations lists yield inaccurate scores)

02

### Get free score & report

Get the quality score for free. Only buy the report when you need it at 1 credit for 30 references.

03

### Improve citations

Identify citations with issues across visibility, age & more. Replace with stronger citations to improve.

Good-to-use Citations

Published Long Ago: 16 citations out of 54 Medium Risk

ⓘ

An old citations is one that was published over 10 years before the year of creation of this report. Journals prefer newer citations as they reflect the current status of research on the topic. Note that some old citations may be seminal works and hence would be acceptable (groundbreaking works).

Action Required: Review and replace these citations with newer citations published in peer-reviewed journals.

## TRINKA.AI

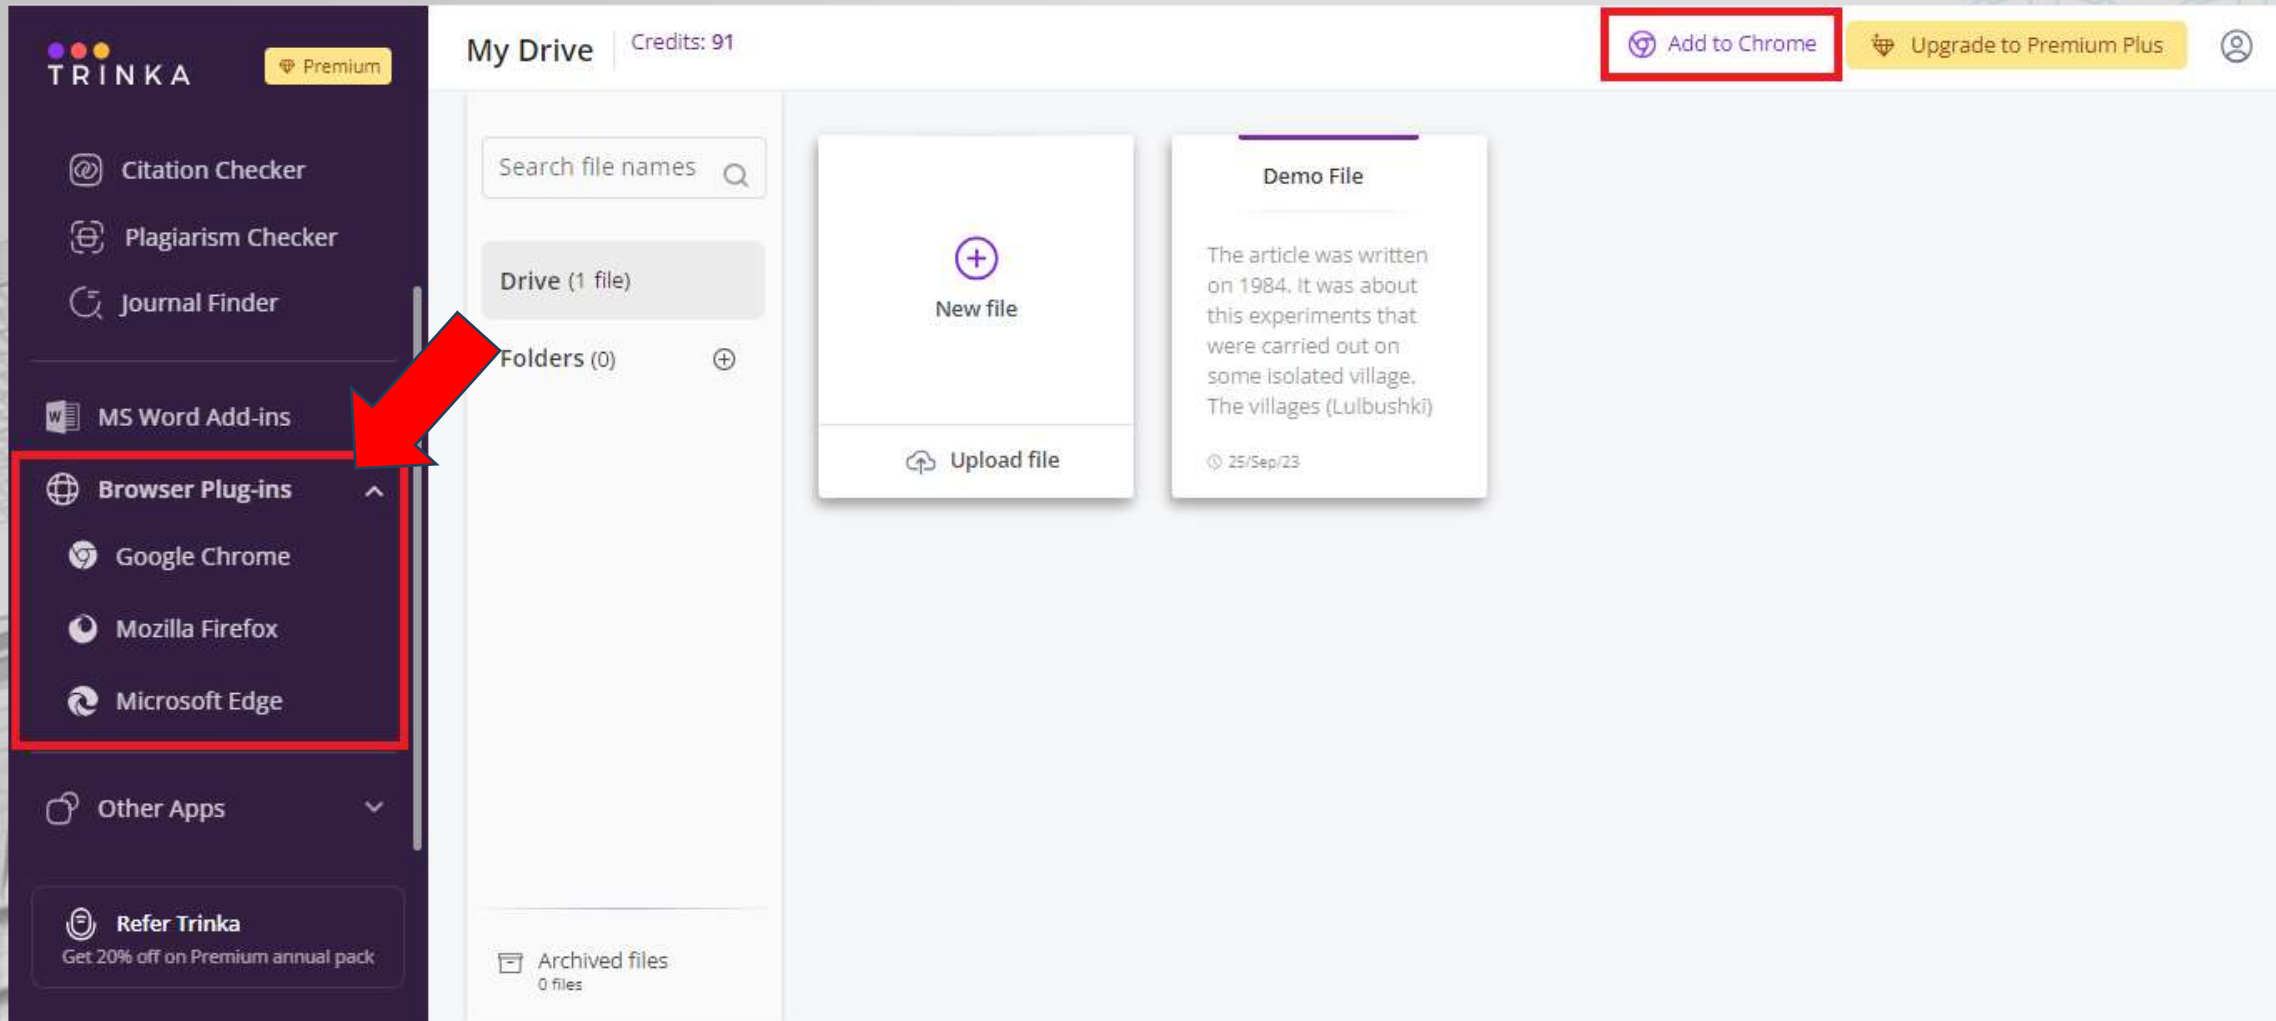

# Menambahkan Add-Ins ke Browser

The screenshot displays the Trinkka application interface. On the left, a dark purple sidebar contains the Trinkka logo and a 'Premium' badge. Below these are several menu items: 'Reports', 'Citation Checker', 'Plagiarism Checker', 'Journal Finder', 'MS Word Add-ins' (highlighted with a red box and a red arrow), 'Windows Add-in', 'Mac Add-in', 'Browser Plug-ins', and 'Other Apps'. At the bottom of the sidebar is a 'Refer Trinkka' section with a 20% discount offer. The main content area is titled 'My Drive' and shows a search bar, file and folder counts, and options to 'New file' or 'Upload file'. A 'Demo File' card is also visible, showing a sample text snippet.

# Menambahkan Plugin ke Browser

The screenshot displays the TRINKA application interface. On the left, a dark sidebar contains the TRINKA logo, a 'Premium' badge, and a list of features: Citation Checker, Plagiarism Checker, Journal Finder, MS Word Add-ins, Browser Plug-ins, and Other Apps. The 'Browser Plug-ins' section is expanded, showing options for Google Chrome, Mozilla Firefox, and Microsoft Edge. A red arrow points to this section. On the right, the main content area shows a 'My Drive' section with a search bar, a file list, and a 'Demo File' card. A red box highlights the 'Add to Chrome' button in the top right corner, with another red arrow pointing to it from the top right of the image.
