

## 15. MO18-5302 Advanced Fatigue & Fracture Mechanics

<b>Module name</b>	<b>Advanced Fatigue &amp; Fracture Mechanics</b>
<b>Module level, if applicable</b>	Master
<b>Code, if applicable</b>	MO18-5302
<b>Subtitle, if applicable</b>	-
<b>Course, if applicable</b>	Advanced Fatigue & Fracture Mechanics
<b>Semester</b>	3 <sup>rd</sup> Semester
<b>Person responsible for the module</b>	Prof. Ir. Eko Budi Djatmiko, M.Sc., Ph.D. Nur Syahroni, S.T., M.T.,Ph.D
<b>Lecturer</b>	Prof. Ir. Eko Budi Djatmiko, M.Sc., Ph.D. Nur Syahroni, S.T., M.T.,Ph.D
<b>Language</b>	Indonesian
<b>Relation to curriculum</b>	Elective course for master degree program in Ocean Engineering
<b>Type of teaching, contact hours</b>	Lecture, <50 students 150 minutes x 16 weeks per semester
<b>Workload</b>	1. Class, $3 \times 50' = 150$ minutes per week 2. Independent Study, $3 \times 60' = 180$ minutes per week 3. Structured Activities, $3 \times 60' = 180$ minutes per week
<b>Credit points</b>	3 CREDITS ~ 4.8 ECTS CREDITS $\times$ 1.6 ECTS
<b>Requirements according to the examination regulations</b>	A student must have attended at least 80% of the lectures to sit in the exams.
<b>Recommended prerequisites</b>	-

<b>Learning outcomes and their corresponding PLOs</b>	<p>CLO.1. Able to understand and explain the basic principles of structural damage mechanism (sea) due to fatigue.</p> <p>CLO.2. Able to understand the procedure and can calculate the fatigue life of the structure by applying the method of deterministic wave load and random (spectral) random loads based on Palmgren-Miner law.</p> <p>CLO.3. Able to understand and explain the basic principles of structural damage mechanism in the form of fracture.</p> <p>CLO.4. Able to understand the procedure and can calculate the period of crack propagation and structure breakdown by applying constant amplitude load method and variable based on Paris-Erdogan law.</p>	<p>LO.8. Able to identify, formulize and solved the science and technology problems related to ocean engineering through the accurate and innovative theoretical, experimental, or computational approach</p>
---	--	---

<b>Content</b>	<p>This course begins with the introduction of structural damage mechanisms due to fatigue, fatigue case on steel structure of marine facilities, fatigue experiment, S-N curve, stress concentration, crack initiation. Then followed by a discussion of the accumulation of structural damage due to fatigue with the Palmgren-Miner hypothesis, the calculation of stress distribution and fatigue with deterministic approach, calculation of stress distribution and fatigue with spectral method, and calculation of fatigue failure with the application of closed form fatigue equation. The next section was introduced on the foundations of fracture mechanics, crack propagation, stress intensity factors, Paris-Erdogan law, final damage by applying constant and variable amplitude load methods, tubular fatigue, and summary calculations of fatigue life of marine structures. This course contains of following materials:</p> <ul style="list-style-type: none"> <li>■ Load cycles as a source of excitation of fatigue and breakdown of marine structures.</li> <li>■ S-N curves and their equations for plate and tubular structures.</li> <li>■ Nominal stress, hot spot stress and Stress Concentration Factor (SCF);</li> <li>■ Calculation of sea structure fatigue by deterministic method;</li> <li>■ Calculation of sea structure fatigue by spectral method;</li> <li>■ Closed-form fatigue equation;</li> <li>■ Factors that affect structural breakdown;</li> <li>■ Determination of Stress Intensity Factor (SIF) and its equations;</li> <li>■ Paris-Erdogan equations and crack propagation curves;</li> <li>■ Fractional calculation of marine structures by the method of accumulation of deterministic wave load cycles;</li> <li>■ Fractional calculation of marine structures by method of accumulation of random wave load cycle.</li> </ul>
<b>Study and examination requirements and forms of examination</b>	<ol style="list-style-type: none"> <li>16. In-class exercise</li> <li>17. Assignment</li> <li>18. Mid-term exam</li> <li>19. Final exam</li> </ol>
<b>Media employed</b>	<p>Offline: LCD, whiteboard, PowerPoint presentation</p> <p>Online: websites (myITS Classroom), Zoom, Microsoft Teams, PowerPoint presentation.</p>
